

Installation of a new tamiseur for performant sieving.

Our Year 2017 is ending with the construction of a new sieving tower in our manufacturing site of Bordeaux (France). Thanks to this new tamiseur (ROTEX), we will be able to sieve granulated sugars into calibrated sugars and provide to our customers the exact size of crystal sugars they are looking for, with a small coefficient of variation. Indeed, our sieve screens can be changed quickly: it gives to this new tool a huge flexibility.

Installation of an automated autoloader every bag by bag for Export

In December 2017, we will install an automated autoloader to load 20' containers to export sugars to other countries in Europe and all over the world. We are able to pack in 25 kg and 1 kg in plastic bags (polyethylene). They are very resistant to temperature changes and wet atmosphere. Moreover, these bags are easy to open. You don't need a sharp object to cut the bag or the sewing thread ! The automated autoloader is our new mean to export calibrated size sugars all over the world.

Re-processing of non-fluiding cane sugars (clumped sugars)

Our year 2017 is also ending with the installation of a lump crusher in our unrefined sugar handling.

Indeed, the imported sugars often arrive in Europe in hard blocks. Thanks to the lump crusher, we will be able to reprocess this sugar unfit for use. Following on from our FSSC22000 system, the sugar is then going through magnets and a metal detector on the production line in order to be fit for the consumption. As far as the sugar get its fluidity back, we can pack it in 1 kg, 2 kg and 5 kg bags (the three sizes of our retail range) in 20 kg, 25 kg, 50 kg, 1 MT and even in bulk tank !

Creation in 2017 of an Innovation Department – “SolutionInnovation”

This Department was founded in 2016. Its mission in our company is to answer to all the expectations of our customers related to « special and rare » sugars as well as sweeteners. Our goal is to become the Specialist Sugars in Europe finding the sugar the most appropriated to the customer uses and needs in terms of taste, texture, sustainable production, manufacture requirements, etc...

Launch of a Doypack® range

In 2018, we will launch a new range of rare sugars, packed in 1 kg Doypack® with a window on the bag where you can see the sugar in transparency. Packing will be done in our factory in Bordeaux (France).
